

CoolCap

BASEBALL BUMP CAP

The MPS Centurion CoolCap™ Baseball Bump Cap incorporates an internal ABS protective shell, providing protection against bumps and scrapes to the head. Perfect for areas where hard hats are not required.

Designed from the start as a bump cap, the CoolCap is attractive in appearance and comfortable to wear, even over long periods of time. Large ventilation panels on each side provide increased airflow. A short brim allows for increased upward visibility.

Encourage personnel to protect themselves, by providing caps that are comfortable and attractive.

COOLCAP BASEBALL BUMP CAP

MPS Centurion Baseball Bump Caps provide lightweight head protection, while doubling as a fashionable, comfortable piece of work wear. The look and feel of the cap makes it more appealing for employees than conventional, plastic bump caps.

The design, available in eight colors, incorporates an ABS protective shell inside a brushed cotton or (in the case of the high-visibility colors) polyester baseball cap. We also offer a cap in Flame-Resistant *Proban*. The shell can be removed, allowing the cap to be laundered.

For added comfort, mesh ventilation panels on each side provide maximum airflow. An adjustable, metal-free hook and loop strap means that one size fits most. The design and shape of the cap and the internal ABS inner shell ensure that the CoolCap fits securely and comfortably over long periods of wear.

IMPORTANT NOTE: Baseball Bump Caps are for use in environments where there is a risk of bumps or scrapes to the head. It is *not* to be used as an industrial safety helmet or hard hat.
