

Hearing protection *isn't*, when it is not being used.....

The danger of exposure to high noise levels in the workplace has been well documented. Loud machinery and equipment, and even the low, droning sounds of some gear can cause short-term and long-term hearing loss. Providing the very best hearing protection shouldn't be a luxury, it should be an accepted practice throughout industry. Unfortunately, as the level of **hearing protection** advances, it can also bring about a **feeling of isolation**. While protecting hearing from damaging noise, most hearing protection eliminates the possibility of normal conversation to where it is hard to realize other personnel are in the area and trying to communicate with you. Users tend to "cheat" on their hearing protection, so they can hear their surroundings.

With their PRO-TEKT Dimension Hearing Protection, Ridgeline, Inc. brings workers together again, by making that isolation a thing of the past. While protecting from dangerous noise levels, you still maintain complete awareness of your work environment. Using their unique, Dynamic Level Sound Compression, hearing is protected from harmful noise above 70dB, while sounds below 70dB are amplified up to eight times. Normal sounds are clearly heard, even at distances. The electronics provide clear, natural sound, yet have an extremely fast "attack time" of less than two milliseconds. **YOU ARE PROTECTED BUT NOT ISOLATED!**

Models are available that are MSHA Certified Intrinsically Safe. Advanced Units allow for connection of transceiver communication systems, radios, cassette tapes and other electronic devices.

- **Hear Everything** You Need to Hear Without Isolation
- Dynamic Level Sound Compression/Sound Amplification Protects Hearing Without Shutting Off/Down Amplification System
- Up to 25dB NRR
- Available as Hardhat Mount or Headband Style
- Optional Dimension 2 With Input Capabilities for Communications, etc.

The fact is, you will hear things you have never heard before in a noisy environment.

Adjustable Hardhat Mount for Hardhats Without Mounting Slots

MINEARS fitted in to the ear muffs of the MAX Integrated Helmet

For personal protection equipment to be used, it must be functional and comfortable. As important as hearing protection is, it is often not worn or worn properly, as users feel it is more important to "hear" than to completely protect themselves from damaging noises. The ability to hear within their vicinity is appreciated more than the possible loss of hearing over time from not using the full protection. The policy of hearing protection that will be followed with compliance must provide the user protection, with more benefits than encumbrance. To truly protect hearing, protection must be at the highest level of performance without frustrating isolation. We can provide you protection that will be used with the Ridgeline PROTEKT System. We would be pleased to show you protection that will truly protect hearing.

SPECIFICATIONS:

Mounting Styles: Over-the-Head, Behind-the-Head and Hardhat

Weight: 9.4-14.6 oz. (model dependent)

Battery Specification: User Replaceable, (4) Size N, 1-1/2 Volt

Battery-life: 200 hrs. Minimum

Gain Control: 0 to 50dB

Approvals: MSHA Certification 2G-4108-0; ANSI/UL 913 for Class I, II and III, Division 1, Group A, B, C and D Hazardous Locations

Warranty: 1 year on Electronics
