

Vision Safety Helmet

VISION

The new Vision Safety Helmet is the first in its class to feature a custom-built fully retractable visor. The Vision, which further enhances Centurion's reputation for innovation in safety and design, exceeds all applicable European safety standards and will therefore be the best integrated head and eye protection available.

Visor

The visor, which has been specifically designed for the Vision helmet, is approved and Kitemarked to EN166 grade B: medium energy impact. Its unique patented retraction mechanism allows the visor to fully retract inside the Vision shell. The visor design also enables users to wear standard prescription spectacles in conjunction with the visor, a possibility that has been denied spectacle wearers in the past.

Shell

The shell, which is of a modern and striking design, is constructed from durable ABS, ensuring that it will retain its attractive appearance throughout its long life. The new,

ingeniously designed Connect clips fit into the almost hidden slot on the side contours, ensuring complete compatibility with the Centurion Connect range of accessories.

The overall design of the shell provides for maximum impact protection, particularly of the vulnerable nape area. Vision also meets additional performance criteria such as protection against molten metal splash, resistance to low temperatures and electrical insulation. It's not surprising, therefore, that the Vision exceeds the EN397 standard, making it the safest head protection in its class.

Comfort

The most important aspect of Vision's wearability is its comfort. Centurion's six point terylene harness and fitted sweatband together with Vision's unique design and perfect balance provide optimum comfort for the user during prolonged use.

It is plain to see that Vision has it all: it would be short-sighted to opt for anything less.

CENTURION

Leading Head Protection Technology

Helmet Features and Benefits

Modern, striking design providing high user acceptability

Complete shell design with **extended nape** gives **greater overall protection**

Accessories

Face Protection...

The full range of Centurion Facescreens (either 150mm or 225mm polycarbonate, acetate or triacetate) can be used on the Vision helmet if full face protection is needed. Simply order the S54V face-screen carrier (which comes complete with Vision Connect clips) or alternatively order spare Vision Connect clips (S575) for use with your existing carrier.

Hearing Protection...

Centurion ear defenders can be worn with the new Vision helmet to provide complete head, face and hearing protection.

The high performance Aegean ear defender from Centurion (code S42V) or the general purpose Baltic ear defender (code S41V) can be used. Both come fitted with the new Vision Connect clips.

Maximum comfort provided...

The Vision safety helmet utilises the well renowned Centurion six point harness. The harness, which features a terylene cradle and fitted brushed nylon sweatband, provides wearers with the optimum comfort during use.

Wide choice of colours available...

Vision helmets are available in a wide choice of colours in order to satisfy customers' requirements and preferences.

Corporate or specific colours can also be produced if needed – contact Centurion for prices and minimum quantities.

The Vision Visor is also available as a separate item – code S578.

Whilst every effort is made to ensure the accuracy of product information, Centurion Safety Products Ltd reserves the right to improve and modify specifications at any time without prior notice.
